

January 29, 2010

Dear Hills of Rivermist Homeowner,

As we expected, the Greater San Antonio area experienced rain showers, and at times, severe storms last night. I saw weather reports that stated the area received approximately .6 inches of rain the past 24 hours.

We expected it to rain on Thursday and I wrote in yesterday's message about the efforts we took to ensure your continued safety in the community and avoid the risk of additional soil movement or erosion on the exposed areas.

I am pleased to share with you that as of 9:00 AM this morning, there has been minimal soil movement and the measures we took yesterday did, in fact, help to divert water away from homes and avoid further erosion to the wall.

We had the Centex team and officials from the City of San Antonio on-site during the day and throughout the night continuously monitoring the rain effects at the community of the Hills at Rivermist. We will continue to diligently monitor the site over the weekend to ensure the continued stability of the site.

Please check for daily updates to the web site and post questions at [www.rivermistinfo.com](http://www.rivermistinfo.com). We will do our best to answer them within 24-48 hours.

Sincerely,

Laurin Darnell  
Centex Homes
